

# Industrial Floor Tiles - Calculator

1. Measure the Length (**L**) and width (**W**) of the floor area you need to cover.
2. Use the chart below to calculate the number of tiles you require.
3. Divide your total number of tiles by 25 to determine how many boxes you will need.

For example: 5m x 3m = 93.75 tiles. Must round up to nearest number in lots of 25 = 100  
 $100 \div 25 = 4$  boxes.
